

SpecCy 2

The image features the title "SpecCy 2" in a large, 3D, blocky font. The letters are rendered with a gradient from bright yellow to orange, giving them a glowing appearance. They are set against a dark, black background speckled with numerous small, white stars of varying sizes, creating a cosmic or space-themed atmosphere. The text is slightly tilted to the right.

BEFORE YOU START

Please check for a README.TXT file located within the root directory of the CDROM. The document provides important information about this particular CDROM and about any late changes before manufacture. It also points out any further useful information.

PICTURES

This CDROM Contains loads and loads of pictures from Adverts, Circuits, Crash, Inlays, Mmachines, Maps, Misc, People, and Screen Shots.

AMIGA - FASTVIEW is an excellent viewer which has been provided within the Pictures directory (needs to be installed to hard drive, easy installable). Non hard drive users can use multiview, FastGIF, FastJPEG, Fullview, PPSHOW, Showiz of Viewtek which are all on the CDROM. All items are completely set up for use with workbench for easy usage.

PC - PC users get Graphic Workshop for Windows (needs installing to hard drive), also it has been pre-set up with all the images as thumb-nails for easy viewing. requires Windows v3.x or higher. All other systems require viewers (to view GIF and JPEG files) as they are not provided on this CDROM.

OTHER MACHINE FORMATS SUPPORTED

(:\PROGRAMS\ARC) Archimedes

MXZ110.SPA

- MXZ v1.10, is the third release of the ARM Unlimited ZX Spectrum emulator with loads of new improvements from the latest version v1.03.

(:\PROGRAMS\ATARI) For the Atari ST Computers

ATARI-SPECCY.ZIP

- Spectrum emulator for Atari ST

ATARI-SPECTRUM.ZIP

- Another Spectrum emulator

ZX_SP207.ZIP

- Yet another Spectrum emulator

(:\PROGRAMS\MAC) For the Apple Macs

MACSPECC.HQ1

- Spectrum emulator for Mac

POWER_SP.BIN

- Spectrum emulator for Power Mac

ZXLOADER.SIT

- ZX Spectrum program loader ie emulator for mac

Some of the files above require programs to extract them and are not supplied with this CDROM Disc.

WHATS ON THE CD FOR THE AMIGA

ZXAM SPECTRUM EMULATOR

The 1st Spectrum Emulator is ZXAM by Antonio J. Pomar Rossello. The program is shareware and the latest version is always available on (0034-71-392829 / 28,000 baud (Tanit BBS). Registered versions can be obtained for \$15 [CASH ONLY], you will receive the latest version available (Probably 128k version). Another good idea is to state which version of the emulator you are currently using as there might not have been an update).

AUTHORS ADDRESS

Antonio J. Pomar Rossello, C/Alferez Cerda no 13-Bajos, Palma de Mallorca 07014, Baleares, SPAIN.
(When sending from the UK send the US Dollars by International recorded delivery or Registered Post).

LOADING ZXAM

To load on your Amiga just double click on the ZXAM directory and the ZXAM_Spectrum icon or ZXAM_Spectrum_FASTER icon for 020 and better system. Documents just double click on the ZXAM_English_GUIDE. The programs are located in the :IGAMES Directory followed by a directory name from A to Z.

OTHER SPECTRUM EMULATORS (:\PROGRAMS\AMIGA)

AAMIGATOZX.README

Spectrum

BUTCHER.README

KGB-13.LHA

MK.LHA

SPCONV-107.LHA

SPECTRUM-1.7.LHA

ZX-SPECTRUM4.7.LHA

Spectrum with Interface 1zx-spectrum4.7.readme.new zx-spectrum4.71.lha - Updated version of the above, with a ROMzx-spectrum4.71.readme bug removed.

ZXAM13.LHA

ZXSPEC.LHA

- Transfers .SNA or KGB snapshots from AmigaToZX.exe Amiga to

- Converts from .ZX (Polish) format butcher.lha to SpecEm readable format

- KGB Spectrum emulator.kgb-1.3.readme v1.3

- Converts snapshots from KGB to JPPmk.readme (.SNA) format

- To convert between the various snapshot formats. ("ESSENTIAL")

- Emulates a 48K Spectrum & readme can load files from tape via sampler.

- ZX Spectrum Emulator v4.7 - emulates zx-spectrum4.7.readme a 48K

- Another Spectrum emulator.

- Yet another Spectrum emulator. (The same one as ZXAM, above?).

WHATS ON THIS CDROM FOR THE PC

JPP SPECTRUM EMULATOR

The 1st Emulator is JPP by Arnt Gulbrandsen. The program is shareware and the latest version is always available Direct from Arnt Gulbrandsen, Komety. 8, N-7036 Trondheim, Norway. When sending for the registered version a good idea is to send a letter to Arnt first and wait for a reply and remember to state which version of the emulator you are currently using as there might not have been an update. Send any cash for the registered version by registered Airmail or International Recorded delivery (see post office for more details and current costs).

LOADING JPP

At your CDROM prompt just type;-

CD IBMPC

JPP-486

(For 486 and higher spec machines)

or **JPP** (All other PC systems)

The programs are located in the :**GAMES** Directory followed by a directory name from A to Z. If you want to copy the files to you hard drive just type {CDROM DRIVE LETTER} ie **D:** then **CD IBMPC** then make a directory on you hard drive lets say its called JPP type **MKDIR C:\JPP** then copy the files from the cdrom to your hard drive type **COPY *.* C:\JPP** then type **C:** then type **CD JPP** and then **JPP-486** to run the emulator.
